ABSTRACT

A system, method and apparatus for a software generated slide show comprising a personal organizer software programed to correspond to a plurality of individual users. The organizer having a plurality of screens through which each of the users can navigate with each of the screens having a slide show window. A first series of selected pictures can be presented for a preselected time period on each of the screens of the software program. The selected pictures can appear in the slide show window independently of the screen said user is viewing. A calendar provided by the software program can hold personal appointments, events and affairs of each of the users separately.
